

Exercise - CSS RESPONSIVE

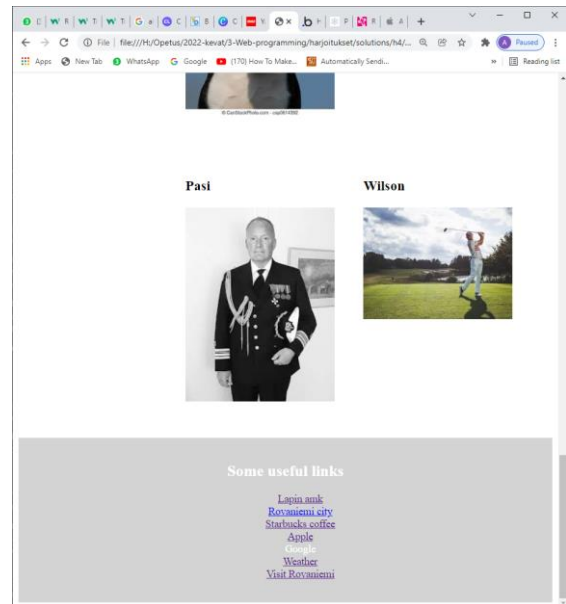

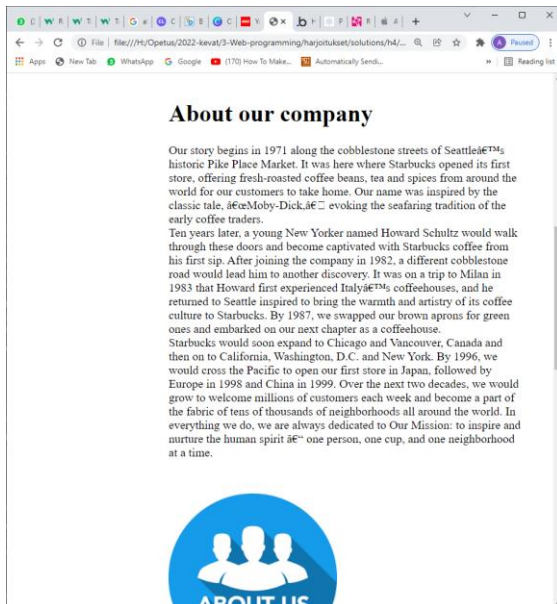

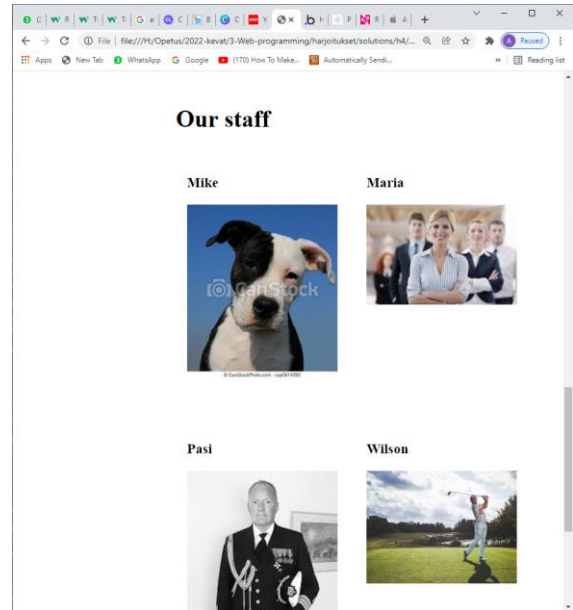

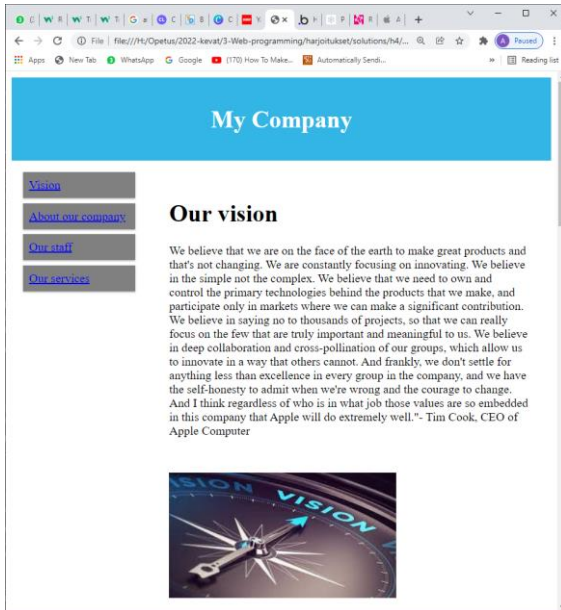

Download the pure html code without any css and the images from moodle. Then create css for the website with media queries to get the following result. You have to add wrap some html elements with div elements to be able to set the styles and media queries correctly. A good starting point is for this exercise is at https://www.w3schools.com/css/tryit.asp?filename=tryresponsive_col-s.

With the screen size over 768px the result should be about like

With the screen size between 600px and 768px the result should be about like in the images

- Vision and about image are under the texts. Two staff members next to each others

And with less than 600px

- All the elements under each others.
- The images under vision and about company are hidden
